# 145 special report on energy storage development

Energy is a prerequisite for development and sustainable energy systems are a prerequisite for sustainable development [1]. While the world has seen rapid development over particularly the last few decades with penetration levels of renewable energy sources reaching double-digit percentages in electricity supply in several countries, many other countries and ...

Electrical energy storage devices are also used for smart grid control, grid stability, and peak-power saving, as well as for frequency and voltage regulation. Electricity generated from renewable sources (e.g., solar power, wind energy) can hardly deliver an immediate response to demand because of a fluctuating power supply. Hence, it has been ...

“The report focuses on a persistent problem facing renewable energy: how to store it. Storing fossil fuels like coal or oil until it's time to use them isn't a problem, but storage systems for solar and wind energy are still being developed that would let them be used long after the sun stops shining or the wind stops blowing,” says Asher Klein for NBC10 Boston on MITEI's “Future of ...
