What are the two stages of energy storage in China?

The first stage (during China's 13th Five-Year Plan period) realizes the energy storage from the R&D demonstration stage to the initial stage of commercialization; the second stage (during China's 14th Five-Year Plan period) realizes the energy storage from the initial stage of commercialization to the stage of large-scale development.

How has energy storage changed over 20 years?

As can be seen from Fig. 1, energy storage has achieved a transformation from scientific research to large-scale application within 20 years. Energy storage has entered the golden period of rapid development. The development of energy storage in China is regional. North China has abundant wind power resources.

How has energy storage been developed?

Energy storage first passed through a technical verification phase during the 12th Five-year Plan period, followed by a second phase of project demonstrations and promotion during the 13th Five-year Plan period. These phases have laid a solid foundation for the development of technologies and applications for large-scale development.

When will energy storage become commercialized?

During this period, the management system, incentive policies and business models of energy storage were mainly explored. It is expected that from 2021 to 2025, energy storage will enter the stage of large-scale development and have the conditions for large-scale commercialization.
