The space saving design is specially designed for small houses.

2 · An electric boiler heats water using electricity and circulates that warm water through radiators or underfloor heating pipes. Usually, these systems include a large hot water cylinder to store the heat, and are paired with special electric meters, which provide cheaper electricity units at certain times of day.

Water & Energy Saving Aerated Showerhead Tailor-made for Rapid Fast Flow Electric Water Heaters, the new water-saving aerator showerhead slashes up to 70% of the water consumed by a traditional 6-gallon water heater (4). The innovative Air Jet Compression Technology increases water discharge to a rate that is comparable to a massaging jet (9L ...

Traditional electric heating uses storage heaters. These store heat inside their core, which is made from a dense heat-retaining material. Usually they heat up overnight, when they can make use of cheaper energy through an off-peak electricity tariff, and gradually release the heat over the following day.
