Given its rapid uptake and installation of solar energy, Australia could potentially have one of the largest PV waste streams in the coming years - with possibly at least 100,000 tonnes of PV panels entering the waste stream by 2035 (refer to Sustainability Victoria for more information). These estimates may be conservative because they ...

Electric vehicles (EVs) of the modern era are almost on the verge of tipping scale against internal combustion engines (ICE). ICE vehicles are favorable since petrol has a much higher energy density and requires less space for storage. However, the ICE emits carbon dioxide which pollutes the environment and causes global warming. Hence, alternate engine ...

A Solar plus Battery system makes a home more energy-independent and can offer significant long-term savings by minimizing the homeowner's electricity bills. In this configuration, the microinverters power the house with solar energy when the sun shines. Excess solar energy is used to charge the IQ Batteries. Once the battery is fully

Cheaper: As long as the voltage of your panels matches the voltage of your battery, you don't need to worry about regulating your voltage when storing solar energy from parallel-wired panels in a battery. This is because your voltage doesn't get added together when wiring in parallel.
