How to store your solar energy. Most homeowners choose to store their solar energy by using a solar battery. Technically, you can store solar energy through mechanical or thermal energy storage, like pumped hydro systems or molten salt energy storage technologies, but these storage options require a lot of space, materials, and moving parts. Overall, not the most practical way ...

A solar module comprises six components, but arguably the most important one is the photovoltaic cell, which generates electricity. The conversion of sunlight, made up of particles called photons, into electrical energy by a solar cell is called the "photovoltaic effect" - hence why we refer to solar cells as "photovoltaic", or PV for short.

3. Explore incentives and rebates. Incentives and state and federal tax rebates can substantially cut your overall costs to install solar. The Federal Investment Tax Credit (ITC) alone can save you 30% on the upfront costs for solar, with state and local rebates knocking the price down even more depending on where you live..
