An eight-hour duration lithium-ion battery project has become the first long-duration energy storage resource selected by a group of non-profit energy suppliers in California.

The first step on the road to today's Li-ion battery was the discovery of a new class of cathode materials, layered transition-metal oxides, such as Li_xCoO_2 , reported in 1980 by Goodenough and collaborators. 35 These layered materials intercalate Li at voltages in excess of 4 V, delivering higher voltage and energy density than TiS_2 . This higher energy density, ...

The deployment of energy storage systems, especially lithium-ion batteries, has been growing significantly during the past decades. However, among this wide utilization, there have been some failures and incidents with consequences ranging from the battery or the whole system being out of service, to the damage of the whole facility and surroundings, and even ...

Lithium-ion batteries are one of the favoured options for renewable energy storage. They are widely seen as one of the main solutions to compensate for the intermittency of wind and sun energy. Utilities around the world have ramped up their storage capabilities using li-ion supersized batteries, huge packs which can store anywhere between 100 ...

The agreement came off the back of the California Public Utility Commission (CPUC) directing Southern California investor-owned electric utilities to fast-track additional energy storage options to enhance regional energy reliability last year in response to the Aliso Canyon gas leak.. John Zahurancik, AES Energy Storage president, said: "These two projects, ...
