What is CATL's new energy storage system design?

Battery industry heavyweight CATL has unveiled its latest innovation in energy storage system design with enhanced energy density and efficiency, as well as zero degradation for both power and capacity.

What is Envision's new energy storage system?

A company representative mentioned that in 2023, Envision set a new standard in energy density with its 20-foot container, 5 MWh battery energy storage system. The latest capacity breakthrough was made possible by the use of large-capacity cells, system integration, compact design, and further optimization within the container.

Should energy storage be co-optimized?

Storage should be co-optimized with clean generation, transmission systems, and strategies to reward consumers for making their electricity use more flexible. Goals that aim for zero emissions are more complex and expensive than net-zero goals that use negative emissions technologies to achieve a reduction of 100%.

International Tier 1 manufacturers like Bosch, Continental, ZF and Hitachi have been the dominant players in the global chassis by wire market for years. Chinese chassis by wire companies are gradually rising, given enormous market potential brought by China's No.1 new energy vehicle position in production and sales volume.

Those changes make it possible to shrink the overall battery considerably while maintaining its energy-storage capacity, thereby achieving a higher energy density. "Those features -- enhanced safety and greater energy density -- are probably the two most-often-touted advantages of a potential solid-state battery," says Huang.
