

Park Tegra Pile Driven Structure Sunfixings

What is a sunfixings Park Tegra pile driven system?

Sunfixings Park Tegra Pile Driven System This system has a single leg that is driven into the ground to achieve a secure anchoring point, making it a quick, streamlined installation for medium to large projects. The standard structure is designed to support 2 modules high in portrait orientation as this allows more sp

What is sunfixings ground Mount Park Tegra Pi?

Sunfixings Ground Mount Park Tegra Pi... This system has a single leg that is driven into the ground to achieve a secure anchoring point, making it a quick, streamlined installation for medium to large projects.

What is a park Tegra ground anchor?

The Park Tegra Ground Anchor is a ground-mounted solar panel mounting system designed for fast and efficient installation on suitable ground conditions. Screws into the ground.

What is a park Tegra ballast?

The Park Tegra Ballast is a ground-mounted solar panel mounting system designed for situations where traditional ground screw solutions aren't ideal. Connects straight to ballast. We've designed the support feet that sit beneath the main structure, to fix directly into concrete ballast using chemical anchors.

What is light Tegra?

The Light Tegra is a low-ballast mounting system designed specifically for flat roofs. Designed simplicity without compromising the strength. We've taken great care in designing a system that is really quick and simple to install but also requires a minimal amount of ballast.

Why should you choose sunfixings over electro-galvanising?

This is because, compared to electro-galvanising, it allows us to specify the thickness of the protective coating. The average thickness of steel parts in other industries is around 200g/m, but at Sunfixings we double this, so that this protective coat is a minimum of 400g/m and therefore, ensuring a long lasting life for our systems.

PARK TEGRA PILE DRIVEN 8.00kg/m² Weight 30° Standard module angle Aluminium, stainless & galvanised steel (EN ISO 1461) Material Our standard structure is designed to support 2 modules high in portrait orientation. This allows more space within the array for more modules. There isn't a limit to how many modules can be installed in 1 line.

PARK TEGRA GROUND ANCHOR 9.77kg/m² Weight 30° Standard module angle Aluminium, stainless & galvanised steel (EN ISO 1461) Material Our standard structure is designed to support 2 modules high in portrait orientation. This allows more space within the array for more modules. There isn't a limit to how many modules can be installed in 1 line.

PARK TEGRA PILE DRIVEN 8,00kg/m² szabványos napelem szerkezet; alumínium, rozsdamentes s horganyzott acél (EN ISO 1461) anyag Alaptermék; kiegészítő elemek; helyzet? napelem tartására van tervezve.
