comprehensive support should be provided to accelerate their rapid development.

“The report focuses on a persistent problem facing renewable energy: how to store it. Storing fossil fuels like coal or oil until it's time to use them isn't a problem, but storage systems for solar and wind energy are still being developed that would let them be used long after the sun stops shining or the wind stops blowing,” says Asher Klein for NBC10 Boston on MIT's “Future of ...

But as the technology approaches 100% efficiency, it gets more expensive and takes more energy to capture additional CO₂. February 23, 2021 Carbon capture and storage (CCS) is any of several technologies that trap carbon dioxide (CO₂) emitted from large industrial plants before this greenhouse gas can enter the atmosphere.
