How does the Encharge storage system work?

There are two common configurations that allow the Encharge storage system to provide power to customer loads independent of the grid. In the whole home (main load panel) backup configuration, Enpower smart switch is installed on the line-side of the main load panels rated up to 200A.

Can the Encharge storage system be added to an existing system?

The Encharge storage system can be added to an existing system without using an Enpower smart switch, however, it will not provide backup power. When installed in this configuration, the Encharge storage system is treated as a distributed energy resource (DER), equivalent to a PV system, and cannot form an intentional island.

Where do Encharge storage systems & generator conductors enter?

Encharge storage system and PV combiner and generator conductors may enter from the bottom, bottom-left or bottom-right sides. Encharge storage system - Conduit may enter from the top right or top left of the Encharge storage system at the pre-defined knockout locations.

How many Encharge storage system units can be connected?

2. The desired number of Encharge storage system units is the value calculated in step 3. The maximum allowed number of Encharge 3 units that can be connected to a single Enpower smart switch is 12 (four Encharge 10). The following table identifies the maximum number of microinverters that can be connected to a given Encharge storage system size.

What is an energy storage system?

An energy storage system is the ability of a system to store energy using the likes of electro-chemical solutions. Solar and wind energy are the top projects the world is embarking on as they can meet future energy requirements, but because they are weather-dependent it is necessary to store the energy generated from these sources.

Where is the Enpower smart switch installed?

The Enpower smart switch is installed on the line-side of the main load panel, and PV and Encharge storage system are interconnected into the Enpower smart switch. The Enpower smart switch can also be installed on the load side of the existing main load panel or service equipment.
